ABOUT NEOMAX

NeoMax is a minority-owned small business with the vision of bringing a diversity of thought, skill, and experience to the information technology field.

With over 10 years of experience in research, engineering, and development, NeoMax is well situated to provide a wide range of business solutions to its customers.

MISSION STATEMENT

To become an industry leader in cultivating a diverse workforce, providing our customers with solutions that keep pace with globally evolving technological challenges.

VALUES

I	Integrity
D	Diversity
E	Empowerment
A	Ambition
S	Service

DIFFERENTIATORS

NeoMax is focused on finding talent from diverse backgrounds to maximize innovation and creativity. Rather than view diversity and inclusion as an aspect of our company, diversity and inclusion *is* our company.

CORE CAPABILITIES

CLOUD ENGINEERING

NeoMax team members played a key role in migrating from a single cloud environment to a multi-cloud environment (AWS, Azure, Google, Oracle and IBM). To minimize end user impact during this process, our team used Jenkins to reliably automate building, testing, and deployment of resources in AWS, automatically pulling code from GitHub, and using AWS services like EC2, CloudFormation, and S3 to manage instantiations on both Windows and Linux.

SERVICENOW DEVELOPMENT

NeoMax team members provide critical support and development of automated workflows in ServiceNow, while providing users with a positive User Interface/User Experience (UI/UX). The team leverages ServiceNow to automate integration with various Application Programming Interfaces (APIs), frequently communicating with stakeholders via Technical Exchange Meetings (TEMs) and tools such as Jira to ensure requirements are met and resolve end-user issues.

ASSESSMENT AND AUTHORIZATION

NeoMax team members play a key role in securing and obtaining Authorization to Operate (ATO) for customer information systems, which is achieved through implementation and documentation of NIST SP 800-53 security controls, and continuous monitoring. Our team leverages supporting vendor tools, such as Xacta360, Rapid7 and Nessus to scan, document, and mitigate vulnerabilities.
